

Experiment 9 – POSIX Threads

```
student@ubuntu:~$ ./thread.sh
Thread 1 : 1
Thread 2 : 1
Thread 1 : 2
Thread 2 : 2
Thread 1 : 3
Thread 2 : 3
Thread 1 : 4
Thread 2 : 4
Thread 1 : 5
Thread 2 : 5
All Threads Completed
student@ubuntu:~$
```

The image shows a terminal window with a dark background and three colored window control buttons (red, yellow, green) at the top left. The terminal displays the output of a program named `thread.sh`. The output shows two threads, Thread 1 and Thread 2, each performing a sequence of operations numbered 1 through 5. The threads execute in parallel, with Thread 1's output appearing slightly ahead of Thread 2's. After the final iteration, the program prints "All Threads Completed" and returns to the shell prompt.
